EDUCATION

UNIVERSITY of CALIFORNIA, LOS ANGELES (UCLA)

Bachelor of Science in Computer Science

Jun. 2026

Master of Music in Clarinet Performance

Expected Jun. 2028

Bachelor of Music in Music Performance (Clarinet)

Jun. 2026

WORK EXPERIENCE

MAXREWARDS

Jun. 2025 – Sep. 2025

Software Engineering Intern

JavaScript, Safari Web Extensions, WebViews, HTTP, Git

- Analyzed authenticated browser traffic across four major financial institutions to identify data-access flows and deliver resilient financial-data connectors.
- Designed and shipped an iOS Safari Web Extension and deep-linked browser handoff that moved authentication from embedded WebViews into Safari for compatibility with browser security controls, then returned users to the mobile app with session state preserved.
- Implemented API and WebView-based connectors with automated tests, session management, and keep-alive heartbeats; redesigned backend schemas to normalize frequently changing bank payloads.

TAIKI

Jun. 2024 – Sep. 2024

Software Engineering Intern

Python, Django, Dart, Flutter, PostgreSQL

- Analyzed and integrated 26 bank and financial-service APIs to automate secure tax-document extraction.
- Built and shipped a cross-platform Flutter application for iOS and Android and a Django client dashboard with streamlined document-retrieval workflows.
- Implemented 26 extraction integrations in Dart and co-designed the Django API and PostgreSQL architecture supporting connector updates and evolving financial-data formats.

SELECTED PROJECTS

NEUTRA

Sep. 2019 – Dec. 2021

Moderation and analytics platform used by 500,000 users

Python, PostgreSQL, FFmpeg

- Built a 320-command moderation, analytics, and music platform used by 500,000 users, with configurable auto-moderation and custom FFmpeg audio effects.
- Designed the PostgreSQL schema and data workflows powering message, user, and security insights, and documented the platform's complete command set.

SUNSET

Feb. 2025 – Present

Multi-user UCLA Recreation scheduling platform

Python, Playwright, HTTP, systemd, Vultr

- Mapped UCLA Recreation's authenticated availability and reservation workflows and implemented automated tennis and pickleball scheduling at the 72-hour release window.
- Built and deployed a multi-user Playwright scheduler with persistent sessions, precise release-time execution, health monitoring, structured logging, and automatic process recovery.

KEYCAD

Sep. 2022 – Mar. 2023

Image-to-CAD pipeline for generating parameterized 3D-printable geometry

Python, OpenCV, OpenSCAD

- Created 19 parameterized OpenSCAD key-blank models from manufacturer specifications, including Schlage, Kwikset, and Medeco profiles.
- Built a Python and OpenCV pipeline that measured biting positions and depths from photographs, applied precision cuts to the corresponding key-blank model, and generated dimensionally accurate STL files for fabrication.

HECATE946.COM

2026 – Present

Interactive software-engineering portfolio

Astro, Svelte, TypeScript, Three.js, WebGL, CSS

- Built and deployed a statically generated Astro portfolio with selectively hydrated Svelte components, typed content, and an interactive Three.js/WebGL hallway.
- Optimized responsive rendering across desktop and mobile, implemented reduced-motion accessibility, and deployed the custom domain through Cloudflare Pages.

3TAP

2026 – Present

Minimal multi-device habit tracker

SvelteKit, TypeScript, Supabase, PostgreSQL, Cloudflare Workers

- Built and deployed a mobile-first habit tracker with a historical activity grid, multi-device access and recovery, habit reordering, archiving, and touch-safe interactions.
- Designed the PostgreSQL data model for boards, habits, and daily entries and implemented date-aware state rules across responsive desktop and mobile interfaces.

TECHNICAL SKILLS

LANGUAGES: Python, C, JavaScript, TypeScript, Dart, SQL, HTML/CSS

TECHNOLOGIES: Django, Flutter, PostgreSQL, Astro, Svelte, SvelteKit, Three.js, Playwright, Supabase, OpenCV, OpenSCAD, Cloudflare Workers, Git
